

R Math Basics

Math Operators

R offers built-in arithmetic operators for performing core mathematical calculations on numeric data.

The `+` operator is used for addition.

Example

```
10 + 5  
# Output: [1] 15
```

The `-` operator is used for subtraction.

Example

```
10 - 5  
# Output: [1] 5
```

Built-in Math Functions

R also provides a variety of built-in mathematical functions for numeric computation.

The `min()` and `max()` functions return the smallest and largest values in a set.

Example

```
max(5, 10, 15)  
# Output: [1] 15  
  
min(5, 10, 15)  
# Output: [1] 5
```

The `sqrt()` function returns the square root of a number.

Example

```
sqrt(16)
# Output: [1] 4
```

The `abs()` function returns the absolute value of a number.

Example

```
abs(-5)
# Output: [1] 5
```

The `ceiling()` and `floor()` functions round numbers up and down to the nearest integer.

Example

```
ceiling(1.4)
# Output: [1] 2

floor(1.4)
# Output: [1] 1
```
